

Decompression kernel time by stage

NVIDIA GeForce RTX 3090 · one warmed, instrumented call per case · stdlib level-6 streams · source d323fee21565

Denominator: sum of recorded kernel durations; memory operations and gaps excluded. No wall-time or speedup comparison.

Fused decode is one indivisible kernel; internal parsing, emission and checks cannot be separated by this trace.

All observed launches count, including guarded launches; stage shares do not establish useful work.

Nsight reports potentially missing CUDA events; plots show recorded activities. Full warnings remain in the report and manifest.
